

Marco Sabatini

Email: [Contact](#) | [GitHub](#) | [Blog](#) | [LinkedIn](#)

Engineering leader with **15+ years of experience building scalable data platforms, distributed systems, and cloud infrastructure** across fintech, cybersecurity, and travel-tech environments.

Proven track record of **leading engineering teams, designing modern data architectures, and delivering production-grade data platforms that support analytics, risk modelling, and data-driven decision making.**

Strong background in **data pipelines, big data ecosystems, cloud-native infrastructure, and platform engineering.** Passionate about **mentoring engineers, building high-performing teams, and aligning technical platforms with business strategy.**

Previously part of **lastminute.com's data platform initiatives**, contributing to the **Big Data pricing analytics platform used to support travel product optimization.**

Core Competencies

Data Platform Architecture

- Data Lakehouse architectures
- Data ingestion and processing pipelines
- Streaming and event-driven systems
- Data lifecycle management
- Data quality and reliability

Cloud Data Platforms

- AWS & Azure storage
- AWS & Azure RDS
- Kubernetes
- Infrastructure as Code (Terraform)

Data Engineering & Technologies

- Spark
- Databricks
- SQL / NoSQL databases

- Elasticsearch / SOLR
- Data orchestration and microservices

Leadership & Strategy

- Engineering team leadership
 - Platform strategy and architecture
 - Cross-team technical coordination
 - Stakeholder alignment with product and business teams
 - Mentoring and developing engineers
-

Professional Experience

Associate Director – Software Engineering

UBS – Lugano, Switzerland

Nov 2024 – Present

Lead a **15-engineer team responsible for migrating financial risk models to a cloud-native data platform** supporting enterprise analytics and risk management.

Key contributions

- Leading the **migration of risk modelling workloads from on-prem infrastructure to Azure-based cloud data platforms**
- Designing scalable platform architecture using **Azure Kubernetes, Databricks, and cloud storage**
- Implementing **Infrastructure as Code with Terraform** to standardize environments and deployments
- Improving scalability and reliability of **data processing pipelines used by quantitative and risk teams**
- Coaching engineers and driving engineering best practices across the team

Tech: Azure storage, Kubernetes, Databricks, Python, Terraform, Docker, Oracle DB, Gitlab

Senior Software Architect

Denexus – Lugano, Switzerland

May 2022 – Nov 2024

Architected and developed a **cyber risk intelligence platform** used to aggregate and enrich large-scale network asset and vulnerability data.

Key contributions

- Designed a **cloud-native platform for ingesting, enriching, and indexing cybersecurity intelligence data**
- Built scalable **data ingestion and enrichment pipelines**
- Implemented microservices enabling **data discovery and search across industrial network assets**
- Collaborated with product leadership to define platform architecture and roadmap

Tech: AWS (ECS, EC2, S3), Databricks, Python, Terraform, Docker, Postgres, Splunk

Senior Software Engineer

Nozomi Networks – Mendrisio, Switzerland

Nov 2020 – May 2022

Developed **data services supporting industrial cybersecurity analytics platforms**.

Key contributions

- Built systems for **collecting, processing, and enriching vulnerability intelligence and industrial protocol data**
- Led a **security research engineering team** responsible for vulnerability intelligence workflows
- Collaborated with SRE teams to implement **AWS infrastructure using Terraform**
- Contributed to improving **data reliability and operational monitoring**

Tech: AWS, Terraform, Elasticsearch, SOLR, Docker, Ruby, Javascript, MySQL

Tech Lead

lastminute.com – Chiasso, Switzerland

Nov 2018 – Nov 2020

Technical leader within the travel platform engineering organization.

Key contributions

- Led backend teams working on **high-scale travel microservices**

- Coordinated cross-team work to **optimize platform performance using production KPIs**
- Supported the migration of legacy services to **cloud-based infrastructure**
- Mentored engineers and promoted engineering best practices

Tech: Kotlin, Java, MySQL

Senior Agile Software Engineer

lastminute.com – Chiasso, Switzerland

Nov 2015 – Nov 2018

Engineer in the team responsible for **building the Big Data pricing analytics platform**.

Key contributions

- Designed and developed **data pipelines for flight pricing analytics**
- Built distributed processing workflows using **Spark on Google Cloud**
- Contributed to the migration from **monolithic systems to microservices architecture**
- Collaborated with product teams to support data-driven pricing optimization

Tech: Scala, Spark, BigQuery, Dataproc, Kotlin, Java

Earlier Experience

Solution Architect Consultant

Wedjaa – Rome, Italy

2011 – 2015

Technology consulting and custom software development across multiple enterprise customers.

Activities included: - Architecture and technology assessments - Enterprise integrations - Technical training on Java performance and Golang

System Analyst

IDS – Rome, Italy

2009 – 2011

Developed software systems for the **aerospace aeronautical navigation domain**, supporting flight procedures and obstacle management.

Software Developer

IBM – Rome, Italy
2008 – 2009

Developed search technology for the publishing market using Apache Lucene.

Education

Master Degree in Computer Science

University of Rome Tor Vergata

Thesis: *Integration of Legacy Systems Using SOA Principles*

Final Grade: 107/110

Professional Training

- Advanced Test Driven Development — J.B. Rainsberger
- Surviving Legacy Code — J.B. Rainsberger
- Applied Functional Programming — Avanscoperta
- Machine Learning & Predictive Analytics — Simone Scardapane
- Secure Coding — Nozomi Networks
